INDIA(Bharath) a developing country fighting with poverty, corruption is not too far to become a developed, economically powerful, self-dependent country in the world. Within a couple of decades India will become the largest economy in the world. It will lead the whole world in all sectors and regain its ancient powers. Our country India, a developing country with fewer opportunities will become a role model for all the countries in the world because of its hardships, good governance, long term goals, sharp decisions, and properly planned diplomatic ties and foreign policies.

INDIA in 2047 will become the world's second largest economy in the world, in all sectors it will touch the skies with glory and success due to the proper measures. The fact to be introduced here is that India has more than 50 percent of its population below the age of 25 and a staggering 65 percent below the age of 35, a young India can work faster and can develop faster. On seeing this fact, the government. takes many steps to make the countrymen empower and wealthiest with skills. some such revolutionary long-term schemes of the government. are Skill India, Atmanirbhar Bharat Abhiyan, Make in India etc.

In the education sector the govt. takes important measures to make education more worthy to make people more skillful and empower because of which in 2047 India becomes one of the largest producers of doctors, engineers etc. The govt. plans to make a good number of IIT's, AIIMS and other world class educational institutes to produce more doctors, engineers etc. India should have at least 1 doctor for every 100 people in our country.

In the space sector at 2047 the ISRO will have its own space station, different interplanetary travelable rockets, many Indian private space agencies which also compete with ISRO and they may introduce different technology to the world because of which it becomes possible to go to our nearest solar system. The private space agency also boosts our ISRO to grow faster than other space agencies because of which our ISRO will become the top space agency in the world. Most of our scientists work in different space agencies. Our countrymen have that experience and knowledge which will meanwhile help us to develop our ISRO as the best of the best space agency indigenously.

India will be mastering A.I technology in 2047 as it starts its research from now Indian engineers have very good innovation skills and it will definitely help to develop A.I technology. The govt. also helps our companies and institutions in all aspects to develop A.I. technology in INDIA.

In 2047 India will become the biggest medicinal exporter. Hence India will have the biggest pharmaceutical sector in the near future.
